Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  exon
```

```
Source information:
The PTB1 chimpanzee BAC library was prepared from DNA isolated from
cultured cells established from the blood of a single male
                                                                                                                                                                                                                                                                                                                    Chromosome 22 Sequencing Project
                                                                                                                                                                                                                                                                                                                                  Sequencing vector: DUC118; 100% of reads
Chemistry: Dye-terminator Big Dye and dGTP; 100% of reads Assembly
program: Phrap; version 0.990329
Consensus quality: 156,231 bases at least 040
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence Quality Assessment:
This entry has been annotated with sequence
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than 1 error in

This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polya tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and reverse transcription bout this sequence, including its location and relationship to other sequences, please visit our Web site (http://fruitfly.berkeley.edu) or send email to location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fil CDNA.

The invention relates to an isolated b'-like (b/-u) polypeptide (l) are polypeptide, polynucleotide enroding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, conditions including reproductive disorders (e.g. infertility, and conditions including reproductive disorders of B7-L polypeptides are extracellular domains and other regulators of B7-L polypeptides are converted and converted of cancer cells based on the observation of growth and maintenance of cancer cells based on the observation of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer and cancers of heamatopoietic system. B7-L polypeptide cancer including seminal vesicle cancer, lung, brain, breast, response to the proposition of consistence of inseases and autoimmune diseases. B7-L molecules are useful or alleviating the symptoms associated with diseases involving correct or treat autoimmune diseases involving correct or treat autoimmune diseases and autoimmune diseases and autoimmune diseases and autoimmune diseases such as systemic immune thrombocycopenic purpura and psoriasis, chronic inflammatory of diseases such as inflammatory bowel diseases (convict or treat autoimmune diseases and culcerative colitis), Grave's disease, Hashimoto's thyroiditis and culcerative colitis), Grave's disease, Hashimoto's thyroiditis and corgan transplantation or to probong grave such as systemic diabetes mellitus. They are also useful for diag alleviation of total short by the collection at the collections, and for treatment of allergy, at the and hypersensitivity reactions, nephropathies (e.g. glomerulonephritis), skin disorders (pemphigus and pemphigoid), endocrinopathies (drave's disease), various pneumopathies (extrinsiz alveolitis), vasculopathies, coeliac disease, anaemia, thrombocytopenias, guillain-Barre syndrome and myasthenia gravis, and lymphoproliferative disorders such as multiple myeloma. The present sequence represents the coding sequence of human B7-Lh2 polypeptide (I). The invention relates to an isolated B7-like (B7-L)

The invention relates to an isolated B7-like (B7-L) polypeptide (I). The useful for treating B7-like polypeptide-related disease, disorders or useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility)

CC miscariage, preterm labour and delivery and endometriosis) and miscariage, preterm labour and delivery and endometriosis) and conferration of the immune response to tumours. (I) plays a role in exeful for enhandriant endometriosis in transgenic mice overexpressing B7-L growth and maintenance of cancer cells based on the observation of polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, pathway can be manipulated to regulate cytocoxic T-lymphocyte response in cestional ar cancer and cancers of haematopoietic system. B7-L polypeptide diseases and autoimmune diseases B7-L molecules are useful for alloyaft transplantation, graft versus host diseases unch as inflammatory of arthritis, multiple sclerosis, diabetes, immune thrombocytopenic purpure and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease such as inflammatory bowel disease (Crohn's disease such as inflammatory bowel disease (Crohn's disease such as inflammatory bowel disease (Crohn's disease and diseases such as inflammatory bowel disease (Crohn's disease and concernication) or to treat ment of diseases and concernication of coxic shock's disease, Hashimeto's Phytopidial and concernication of toxic shock syndrome or allosenstication diseases.

CC dispetes mellitus. They are also useful for diagnosis and treatment of diseases and concernications in the companies of the concernication of toxic shock syndrome or allosenstication of toxic shock syndrome or allosenstication of toxic shock syndrome or allosenstication of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New B7-like polypeptides, polynucleotides and their modulators, useful for diagnosing, preventing and treating reproductive, immune and proliferative disorders, e.g. cancer and arteriosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1175 BP; 295 A; 307 C; 286 G; 287 T; 0 U; 0 Other;

```
The invention relates to an isolated B7-like (B7-L) polypeptide (I). The conjugation included encoding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and character and enlaturery and endometriosis) and conter regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role in growth and maintenance of cancer cells based on the observation of seminal vesicle hyperplasia in transgenic mice overexpressing B7-L concer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer and cancers of haematopoietic system B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease, T-cell dependent B-cell mediated diseases and autoimmune diseases. T-cell dependent C for allowating the symptoms associated with diseases such as systemic immune chloroxic pathway can be environed architis, multiple sclerosis, diabetes, immune thrombootytopentic purpura and psoriasis, chronic inflammatory cullesses such as inflammatory bowel disease (Crohn's disease and ulcerative colitis), Grave's disease (Crohn's disease and ulcerative colitis), Grave's disease, Hashimoto's thyroiditis and colitis and content and psoriasis, chronic and specific and colitis and content and psoriasis, chronic and specific and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis and colitis 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of diseases involving abnormal cell proliferation, including arteriosclerosis and viscular restenosis. Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for treatment of allergy, asthma and hypersensitivity

as targets

or

for regulation of their expression and activity,

of gene therapy. The genes are involved in tissue and/or cell regeneration. Membrane proteins, signal transduction-related proteins, transcription-related proteins, disease-related proteins and genes encoding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence presented is a cDNA of the invention. Note: Some of the sequence of this patent is not represented in the printed specification, but

The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel polypeptides. Also claimed is a polypeptide encoded by the polynucleotide or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesising the polynucleotide, or as a probe for detecting the polynucleotide in the polynucleotide and encoded for detecting the polynucleotide. The polynucleotide and encoded for detecting the polynucleotide. The polynucleotides and encoded proteins are useful as pharmaceutical agents and many disease-related genes may be included in them, for developing a diagnostic marker or New polynucleotides and polypeptides, useful for developing a diagnostic marker or medicines for regulation of their expression and activity, or Claim 1; Page; 222pp; English. as targets of gene therapy

The polypeptide, polynucleotide encoding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immue response to tumours. (I) plays a role in growth and maintenance of cancer cells based on the observation of

seminal vesicle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (1) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cesticular cancer and cancers of haematopoietic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease. T-cell dependant B-cc call mediated diseases and autoimmune diseases. B7-L molecules are useful correct alleviating the symptoms associated with diseases such as systemic immune cell dysfunction or to treat autoimmune diseases such as systemic immune thrombocytopenic purpura and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and disease into a collitis), Garav's disease, Hashimoto's thyroiditis and disease such as inflammatory bowel disease (Crohn's disease and disease, collines, Tavy are also useful as immunosuppressive agents for dispetes mellitus. They are also useful as immunosuppressive agents for conjectules are also useful for disposis and treatment of diseases involving abnormal cell proliferation, including arteriosclerosis and reatment of convascular restenosis. Antagonists of B7-L polypeptides are useful for vascular restenosis, and pemphigus and pemphigus did convascular propathies (e.g. glomerulonephritis), skin disorders reactions, nephropathies (e.g. glomerulonephritis), skin disorders canaemia, thrombocytopenias, Guillain-Barre syndrome and myasthemia and myasthemia and anaemia, thrombocytopenias, Guillain-Barre syndrome and myasthemia and anaemia and anaemia and anaemia anaemia and anaemia and anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia anaemia ana

responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fitp.wipo.int/pub/published_pot_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain creation (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed control of (II) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal constitution of energy in tissue, as molecular weight markers and as a food complypeptide in tissue, as molecular weight markers and as a food consuperant protein expression or bological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations

The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also concluded is a purified polypetide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for care useful in diagnostics as expressed sequence tags (EST) for in forensics, in assessing biodiversities, or in identifying mutations or responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, corromosome and gene mapping, in the recombinant production of corromosome and gene mapping, in the recombinant production of corructing antibodies specific for it. The present sequence is useful for generating antibodies specific for it. The present sequence for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence. The sequence data corrections of the sequence of the sequence obtained in electronic format directly from USPTO at sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TCAACGICCACCCAGGCCAGCAAGICAICCACAGGCIICTITIAAICIGGCCAGICCIGA 1140

Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              104 ICCCAGGCTCGCTTCAACTGCACCGTCTCCCAGGGCTGGAAGCTCATCATGTGGGGTCTC

New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
           Drosophila melanogaster expressed polynucleotide SEQ ID NO 40961
                                   Drosophila; developmental biology; cell signalling; insecticide;
                                                                                                                                                                                                                                                                                                                                     Claim 1; SEQ ID NO 40961; 21pp + Sequence Listing;

The probes are useful for measuring human gene expression in a human breast sample, where the probe byridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, include: breast cancer, disorders of development, inflammatory diseases of the breast cancer, fibrocystic changes, proliferative breast diseases of the breast unmours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format

ABL15493/c
```

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded protesins (ABBS7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Drosophila melanogaster expressed polynucleotide SEQ ID NO 40958.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Drosophila; developmental biology; cell signalling; insecticide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      $
                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL06175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mouse, B7-like protein; B7-L; antiinfertility; gynaecological; antitumour; cytostatic; immunosuppressive; antiarthritic; antirheumatic; antiinflammatory; dermatological; antipsoriatic; neuroprotective; antidiabetic; haemostatic; antithyroid; antiulcer; antiallergic;
                                                                                                                                    New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antiasthmatic, nephrotropic, antibacterial; virucide; tumour; cancer; reproductive disorder; graft versus host disease; autoimmune disease; toxic shock syndrome; allergy; nephropathy; skin disorder; endocrinopathy; lymphoproliferative disorder; gene; ss.

The invention relates to an isolated B7-like (B7-L) polypeptide (I). The colypeptide, polymucleotide encoding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or useful for treating B7-like polypeptide-related disease, disorders or miscarriage, preterm labour and delivery and endometriosis) and miscarriage, preterm labour and delivery and endometriosis) and continuous and other regulators of B7-L polypeptides are extracellular domains and other regulators of B7-L polypeptides are cuseful for enhancing the immune response to tumours. (I) plays a role in geninal vesicle hyperplasia in transgenic mice overexpressing B7-L colypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer. Lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung brain, breast, ovarian, cancer including seminal vesicle cancer, lung brain, breast, ovarian, cancer including seminal vesicle cancer, lung brain, breast, ovarian, cancer including seminal vesicle cancer, lung brain, breast, ovarian, callograft transplantation, graft versus host disease, T-cell dependent B-coloration the symptoms associated with diseases unch a sinflammatory with diseases unch as inflammatory bowel diseases. B7-L molecules are useful contrainve colitics), Grave's disease, Hashinote's throndocytopenic purpura and psoriasis; chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and organ transplantation or to prolong graft survival. B7-L bone marrow and organ transplantation or to prolong graft survival. B7-L coloration of toxic shock syndrome or allosometric sateriors, and proliferation, including arteriosclerosis and culturing abnormal cell proliferation, including arteriosclerosis and culturing and permishing (G globerland), and organ transplantation or allosmenticial and permishing of allery, asthma and hypersensitivity creactions, nephropathies (e.g. glomerlanding) attended to disease (C generalization), including and p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Glial cell line-derived neurotrophic factor receptor gamma 1;

length protein of a gial cell line-derived neurotrophic factor receptor gamma 1 (GDNFR-gamma1). The amplified product was subsequently cloned and expressed in Baculovirus. GDNFR-beta shares high homology with GDNFR alpha, which is capable of complexing with gial cell line-derived neurotrophic factor (GDNF) and mediating cell response to GDNF. The GDNF polypeptides and agonists can be used for treating disorders associated with decreased activity of the respective polypeptides. They can be used for treating neurodegenerative diseases such as amyotrophic lateral distances is, Parkinson's disease, schizophrenia, insomnia, tardive dyskenisia, hypertension, pituitary adenomas, hyperprolactinemia, thyroid tumour, renal disorders, kidney failure, gut dysfunction, or for tregeneration of cardiomyocytes, epithelium or hepatocytes. Antagonists of the propertion of the continuous discontinuous and disorders are discontinuous.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated glial cell derived neurotrophic factor receptors - used to develop products for treating e.g. neurodegenerative disorders, schizophrenia, hypertension, tumours, renal disorders, kidney failure or

New Arabidopsis thaliana nucleic acid for identifying homologous genes, producing compositions that modulate the expression or function of its encoded protein, and mapping functional regions of protein.

Claim 1; SEQ ID NO 930; 49pp + Sequence Listing; English.

The invention relates to an Arabidopsis thaliana nucleic acid (I) comprising a sequence capable of hybridising under stringent conditions comprising a sequence ababted hybridising under stringent conditions to a sequence salected from any one of 999 sequences (ABNO9231-ABNO9231). Given in the specification or its fragment. A polypeptide (II) encoded by given in the specification or its fragment. A polypeptide (II) encoded by comprising an exogenous nucleic acid is genetically modified cell (IV) comprising an exogenous nucleic acid, is cuseful for screening a candidate agent for its biological effect. (I) is cuseful in identifying homologous or related genes, in producing compositions that modulate the expression or function of its encoded protein, mapping functional regions of the protein and in studying compositions that modulate the expression or function of its encoded associated physiological pathways. (I) is also useful for the genetic manipulation of cells, particularly plant cells. (I) is also useful in strength of screening assays of various plants strains to determine the strains that are best capable of withstanding a particular disease or environmental care best capable of withstanding a particular disease or environmental crops to pathways. The screened agents are useful in improved methods of treating production of a biosynthetic product in a plant. Compared to dentifying other mediators that may induce their tolerance to environmental stress. (II) is also useful for identifying other mediators that enhance to which any specific insect addor pathogen is responsible for damage to a conficunat plant, for identifying other mediators that enhance to environmental stress. (I) is also useful in the study of genetic function and regulation, commercial or medicinal value and conficulations of nutritional, commercial or medicinal or medicinal or for identifying productions of nutritional, commercial or medicinal or for identifying productions of nutritional commercial or medicinal or for alteration of the c

```
This sequence encodes a novel glial cell line-derived neurotrophic factor alpha-3 receptor (GDNF alpha-3). This protein can be used to treat e.g. neurodegenerative diseases (such as Parkinson's Disease, amyotrophic lateral sclerosis (ALS), spinal muscular atrophy (SMA), Huntington's Disease, Alzheimer's Disease, diabetic neuropathy), muscular diseases (including the muscular dystrophies) and nerve and muscle trauma and in diagnostic assays for such conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New factor alpha 3 receptor polypeptide and e.g. DNA and agonists - used to treat neuro degenerative diseases, muscular diseases and nerve and muscle trauma and in diagnostic assays.
that may affect the biological function of the gene or gene products. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=999909770445
                                                                                                                                                                                                                                                                                                                                                                                                                            Glial cell line-derived neurotrophic factor alpha-3 receptor; GDNF; treatment; neurodegenerative disease; Parkinson's Disease; ALS; SWA; amyotrophic lateral sclerosis; spinal muscular atrophy; nerve; trauma; Huntington's Disease; Alzheimer's Disease; diabetic neuropathy; muscle;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 65, Application US/09220528A

Patent No. 6284540

GENERAL INFORMATION:

APPLICANT: Milbrandt, Jeffrey D.

APPLICANT: Milbrandt, Jeffrey D.

APPLICANT: Milbrandt, Jeffrey D.

TITLE OF INVENTION: Artemin, A No. 6284540el Neurotrophic Factor

FILE REFERENCE: 6029-7998

CURRENT APPLICATION NUMBER: US/09/220,528A

CURRENT FILING DATE: 1998-12-24

EARLIER APPLICATION NUMBER: 60/108,148

EARLIER FILING DATE: 1998-11-12

EARLIER FILING DATE: 1998-11-12

EARLIER FILING DATE: 1998-11-12

EARLIER FILING DATE: 1998-09-29

NUMBER: OF SEQ DE NOS: 120

Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR PELING DATE: 1998-07-27
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 12735
LENGTH: 1857

GENERAL INFORMATION:
APPLICANT: Kunio NAKASHIMA et al.
TITLE OF INVENTION: NOVEL POLYPEPTIDE GENE CDNA, VECTOR
TITLE OF INVENTION: CONTAINING SAID CDNA, HOST CELLS TRANSFORMED WITH SAID
TITLE OF INVENTION: VECTOR, POLYPEPTIDE PRODUCED THEREBY, METHOD OF PRODUCING
TITLE OF INVENTION: SAID POLYPEPTIDE, DNA ENCODING SAID POLYPEPTIDE AND ANTIBODY
TITLE OF INVENTION: TO SAID POLYPEPTIDE
